

Dmitry Mukha

Senior JavaScript Engineer

ksufinski.com

Dnipro, Ukraine. Open for relocation

Experience

Ardas group, eSputnik

Lead JavaScript Engineer; dec 2018 — present

Participating in technical requirements preparation, defined key development process guidelines for front-end team. Keeping technical excellence of the project: documentation, architecture, monitoring, experimentation and adoption of new technologies.

Senior JavaScript Engineer; may 2018 — dec 2018

Improved development workflow to increase productivity and communication between developers, QA and DevOps engineers. Implemented development environment and tasks automation (bash, node.js), build configuration optimizations (webpack).

JavaScript Engineer; feb 2017 — may 2018

Implemented and coached team in Angular + Redux and migrated from MVC to CBA.

inFocus

Co-Founder and Software Engineer; nov 2017 — dec 2018

inFocus is a personal productivity and task management tool focused on remote stuff needs. As a technical co-founder my goal was to implement mobile extension to existing hardware product. During problem-solution fit stage I was engaged in problem research and customer development process, developed mobile application (react native, node.js, MongoDB, Redis) to reach minimum viable product features list and released private beta.

Ardas group, outsourcing project

Junior JavaScript Developer; jun 2016 — feb 2017

Developed and maintained project management and planning software (Angular.js, Angular) with multilayered business logic. Enabled application offline support by Service Worker API.

Lira

Software Engineer; nov 2015 — jun 2016

Freelance job turned to graduation project with title “Printing business process automation”. Designed and developed system (node.js, MongoDB, Angular.js) to improve workflow and automate counts of finish printed materials.

Education

YC Startup School 2018

NMAU

Bachelor of automation and computer integrated technologies; 2016

Skills and attributions

Instead of writing endless list of JavaScript libraries that comes and goes I'd write few lines about things that not change. I always trying to understand business needs and craft the right solution, have excellent communication and problem-solving skills in a win-win way. Believe that holocratic approach works in strong teams. When not engineering, I'm usually cycling, reading non-fiction (and others too, but it's not very) books or having time with friends.

Endless list: Confident in JavaScript stack. Can read, debug and somehow write Java. Server-side: Node.js, Express. NoSQL databases: MongoDB, Redis and their Node.js drivers. Client-side frameworks, libraries: TypeScript, Angular.js, Angular, React Native, React, Redux, Web Components, Service Worker. Build and test tools: Gulp, Webpack, Rollup, Jest, Karma, Jasmine, Protractor...
